

INSTRUCTIONS FOR AUTHORS – JOURNAL OF HORTICULTURAL RESEARCH

The **Journal of Horticultural Research** is owned by the National Institute of Horticultural Research (Skierniewice, Poland). Please send any concerns to journal@inhort.pl.

- **Journal of Horticultural Research** (J. Hort. Res.) is a peer-reviewed journal that publishes original papers, short communications, and review articles covering basic sciences as well as practical aspects of fruit, vegetable, and ornamental plant research.
- The main focus of the Journal is on **temperate zone** horticulture. Manuscripts dealing with local issues will be accepted for evaluation only if they provide conclusions important to readers from other regions.
- The areas covered by the Journal include: biotechnology, plant breeding, pests and diseases, crop cultivation outdoor and under covers, glasshouse climate, weed science, soil biology, soil management and plant nutrition, growth regulators, plant–water relations, postharvest physiology and quality evaluation, nutritional value, storage and processing technology, seed science, economics and management research.
- The main criteria for manuscripts' acceptance for publication are **originality**, scientific **value**, data of **repeated** experiments, and **relevance**. Manuscripts based on the results of the 1-year or 1-growing season field trials and other experiments without repetitions will be rejected.
- The Journal is published semiannually. The papers accepted for publication will be published online on a free access basis. Manuscripts accepted for publication may be published "[ahead of print](#)".
- Before submitting a manuscript, authors are required to carefully review all journal information. Authors declare that the submitted manuscript has been prepared in accordance with the principles set out in the [instructions for authors](#) and with the standards of research and publication [ethics](#). The manuscript submitted should not have been published previously, either in parts or as a whole, and not being considered for publication elsewhere. A plagiarism detection program will be used for each submission.
- The substantive contribution of each coauthor must be specified (research concept and design, collection or assembly of data, data analysis and interpretation, writing the article, critical revision of the article, final approval of the article).
- When submitting a manuscript, please provide your ORCID iDs. However, authors are responsible for ensuring that their names and identifiers do not appear in the text to ensure the anonymity of the evaluation.
- The time from submission to publication is approximately 6 months. Proposing at least three candidate reviewers can significantly speed up the manuscript evaluation process. Candidates should represent specialties related to the subject of the manuscript, come from institutions other than the authors of the manuscript and cannot be coauthors of the author's previous publications.
- Manuscript submission: www.editorialsystem.com/jhr/
- Manuscripts should be written in **English**.
- All Latin (scientific) names should be written in **italics**. Cited articles written in Cyrillic should be transliterated according to the ISO standard.
- **Units** should be expressed according to the SI system. The common names of active substances of plant protection chemicals, including growth regulators, approved by BSI, WSSA or ISO should be used (trade names in brackets). Otherwise, the full chemical name (IUPAC nomenclature) shall be provided. For each chemical, the trade name and product formulation should be provided only in the "Materials and methods" section. Doses of plant protection products should be expressed as active ingredients (volume or weight of commercial products should be given in brackets) throughout the manuscript.

INSTRUCTIONS FOR AUTHORS – JOURNAL OF HORTICULTURAL RESEARCH

- The full **paper** should not exceed 20 pages, including references, tables, figures and photographs.
- A **short communication** should not exceed 15 pages and one illustration.
- A **review** paper should not exceed 30 pages.
- The title page should contain the full title of the paper, running title (up to five words), and key words (4–6).
- The **ABSTRACT** should not contain any abbreviations or references (purpose of the research – one sentence; material and methods – one or two sentences; results – maximum five sentences; conclusion – one sentence).
- The **INTRODUCTION** should describe the state of the art in the area of research and the objective of the work.
- **MATERIALS AND METHODS** should include full details of the experimental procedures and the comprehensive information concerning data set exploration procedures and statistical methods used. For each treatment number of objects and information about experiment organization (number of objects, number of replicates, number of experiment repetitions) should be given. Information about software used for data processing should be also given.
- The **RESULTS** should be presented in clear and precise terms, without data repeated in tables and figures. Color photographs will be accepted exceptionally, only when they provide critical information.
- The **DISCUSSION** should be concise and kept to the topic.
- **CONCLUSIONS** should highlight information about the scientific **novelty** and **practical value** of the results obtained. If there is more than one, organize them into points.
- **REFERENCES** should be listed in alphabetical order of the authors. Citations in the text should be by name of the author and year of publication, chronologically. Papers by the same authors should be listed in chronological order, without numbering. If they are published in the same year, they should be lettered in a sequence: 2002a, 2002b, etc. Journal titles should be written in full, not abbreviated. Please, add the **DOI** (if present).

The following standard forms should be used:

Lee M. 1993. DNA fingerprinting of crop germplasm. Proceedings of the Integrated Crop Management Conference. Iowa State University, USA, December 1–2, pp. 261–265. DOI: 10.31274/icm-180809-450.

Mika A., Buler Z., Wójcik K., Konopacka D. 2019. Influence of the plastic cover on the protection of sweet cherry fruit against cracking, on the microclimate under cover and fruit quality. Journal of Horticultural Research 27(2): 31–38. DOI: 10.2478/johr-2019-0018.

Smith A.B. 1980. Growth of plants. In: Engel W. (Ed.), Encyclopaedia of science, vol. 2. PWN, Warsaw, Poland, pp. 82–94.

Smith A.B., Luck G.F. 1988. Advances in science. PWN, Warsaw, Poland, 325 p.

- The **tables** with titles should be numbered successively as they occur in the text. Tables must fit in standard A4 page with 2.5 cm margins all around, positioned vertically. The **figures** and photographs with captions should be numbered successively as they occur in the text. The **graphs** shall be saved in **editable** format. No bitmap files (TIFF, GIF, JPG etc.) will be accepted. The resolution of **photographs** should be at least 300 dpi. The reader should be able to interpret tables and figures without referring to the text. Therefore, they should include not only the averages, but also information on variability, statistical significance, statistical tests used, and other procedures enabling the interpretation of results.
